

# Telepsychiatry in the time of COVID-19: Bridging gaps and harnessing the potential of technology for mental health

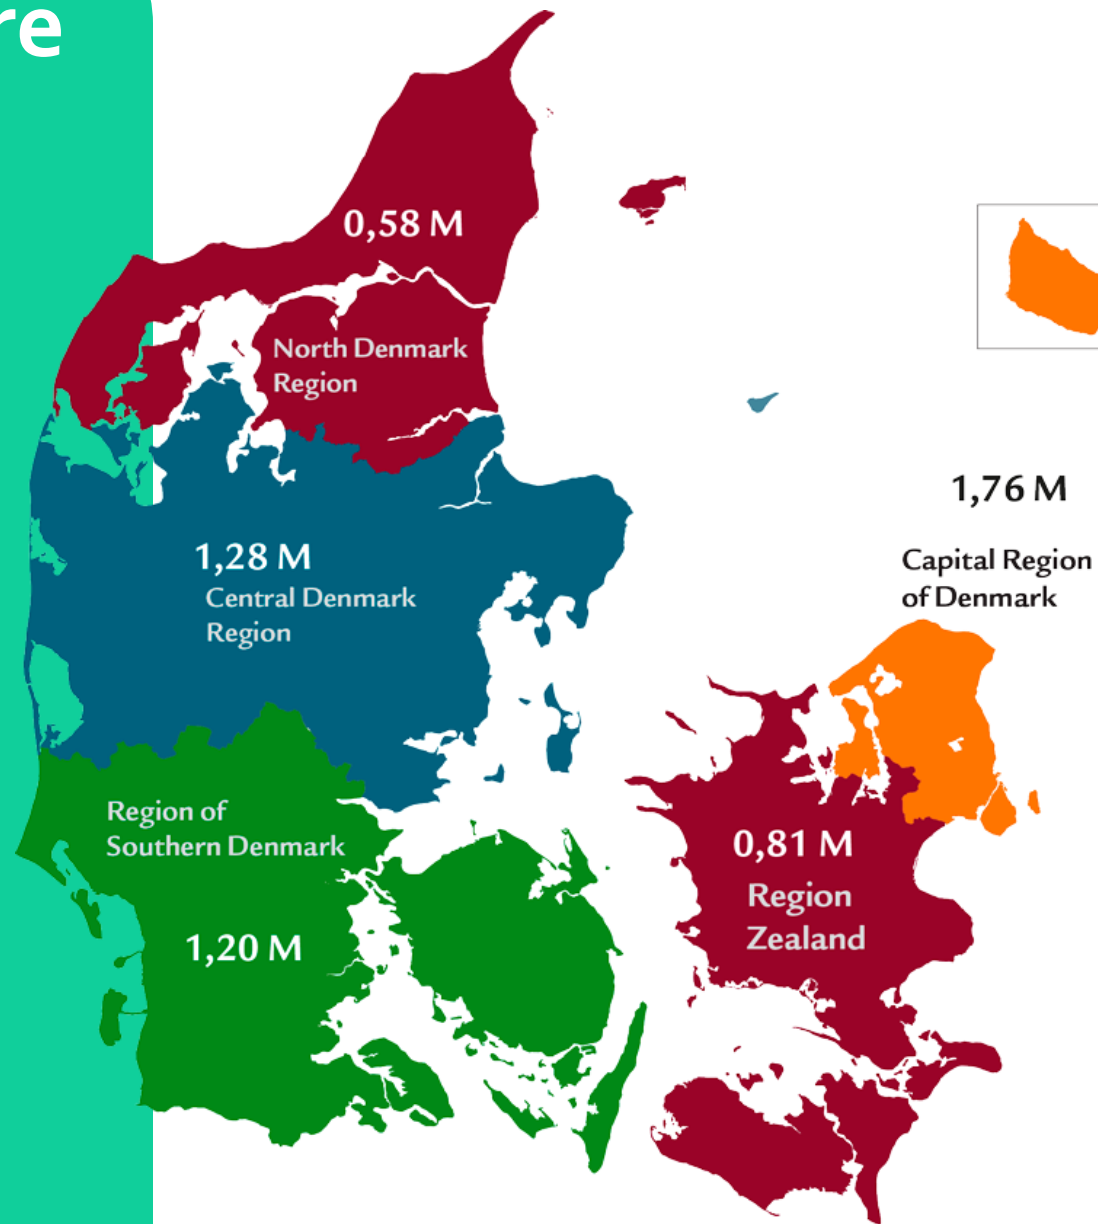

# Outline for the next 20 minutes

1. Mental health in Denmark – in brief
2. Introducing Centre for Telepsychiatry
3. Improving access and bridging gaps in the time of COVID-19:
  - Video consultations in outpatient care
  - Internet-based therapy
4. Moving forward with telepsychiatry
5. Q&As

# Mental health care in Denmark

- A public mental health care system
- Equal and free right to services for all citizens
- Community mental health care services provided by municipalities – **primary care**
- Specialized mental health care is provided by the five Danish regions – **secondary care**
- Family doctors (GPs) act as gatekeepers to secondary care services

# What is Centre for Telepsychiatry?

A research and innovation centre in the Mental Health Services in the Region of Southern Denmark

We support digital innovation for mental health and wellbeing from catalysing new ideas through to developing, deploying and evaluating the impacts.

**Regionally based, operates nationally!**

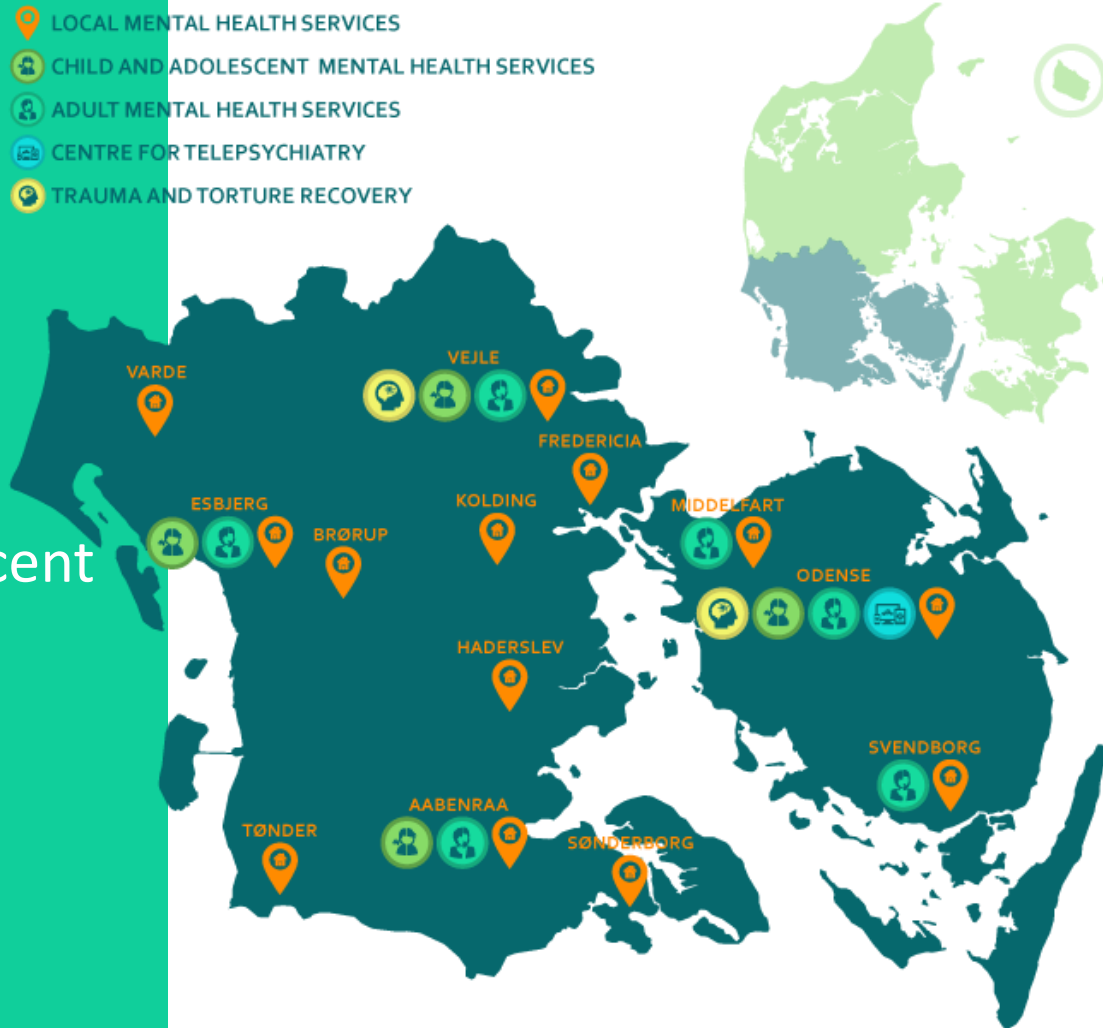

# Part of a mental health hospital organisation

## One mental health hospital:

- 6 adult departments,
- 2 Children and Adolescent Mental Health departments
- 13 community mental health services

# Shared challenges

- Increasing prevalence of mental disorders in the Danish population
- A troubling increase in mental health problems among children and young people
- Treatment gap for mental health disorders
- Lack of mental health specialists

Increasing prevalence of mental disorders  
in the Danish population  
(2010-2016)

Source: Styrket indsats for mennesker med psykiske lidelser, Sundhedsstyrelsen, 2018.  
Den Nationale Sundhedsprofil, Sundhedsstyrelsen, 2018.

# Benefits of digital tools for mental health

- Convenient and flexible
- Services tailored to specific needs and preferences
- Low-cost or free
- Fills service gaps
- Rapid access and shorter wait times
- Saves practitioners' time
- Cost-effective to the health system

# Barriers for implementing digital tools

- Concerns about data security and privacy
- Lack of shared data standards limiting interoperability
- Technical difficulties and low health literacy
- Low engagement and retention rates among users – poor adherence
- Uneven evidence-base for effectiveness
- Lack of practice guidelines for using digital mental services

# Who are suitable for e-mental health?

Ideal candidates for e-mental health?

- All age groups and socio-economic groups
- For people with increased risk of developing mental illness
- For people who are experiencing mild to moderate symptoms of mental illness

→ Strong evidence base for targeting mild to moderate conditions

→ Less evidence for using e-mental health for people with complex/severe mental illness or elevated risk of self-harm or suicide

# Defining telepsychiatry and e-mental health

**Telepsychiatry** is the use of information and communications technologies to provide clinical psychiatric care from a distance.

**E-mental health** refers to the use of the internet and related technologies to deliver mental health information, services and care for promoting mental health and preventing and treating mental health problems.

# **Improving access and bridging gaps in the time of COVID-19**

**- Videoconsultation in outpatient care**

# Share of video consultations in outpatient care during Covid-19

# Video consultations in outpatient care

- Implemented at scale from 2015 with reimbursement for service equaling FtF
- Clinician at the hospital, patient in their home using private tablet, smartphone or computer
- Used as an adjunct to regular outpatient care for medication management, psychotherapy and other forms of therapeutic and supportive consultations
- Compliant with data security and patient safety guidelines

# COVID-19 changed the need for video communication

Video consultations

Group therapy via video

Health and social care  
meetings via video

# Gap between supply and demand necessitated the implementation of My Hospital app

# Implementation strategy for My Hospital

Swift implementation through 3 phases in each mental health department:

## 1. Preparation

- Meeting with department management
- Close coordination with designated contact persons
- Setting up technical workflows

## 2. Upstart

- Webinars
- Tutorials
- Testing the service
- Technical support hotline

## 3. Operation

- Follow-up meetings
- Technical support
- On site support

# Number of video consultations during COVID-19

# Preliminary results from the ongoing evaluation of My Hospital app

- Infrastructure of local technical key persons in each department is important – enables peer support
- Technical support is crucial – hotline and on site support – creates ‘technical safety’
- Adjusting workflows, technical configuration of equipment and professional identity
- Video tutorials and webinars as necessary learning tools
- Information and training needs to be tailored to patients and professionals!

A person wearing headphones is looking at a laptop screen. The image is overlaid with a teal circle containing white text. The background is a light teal color.

# Improving access and bridging gaps in the time of COVID-19

- Internet-delivered psychotherapy

# Internet-delivered therapy

- Internet-delivered Cognitive Behaviour Therapy - iCBT for short
- Self-help treatment program delivered with support from a clinician.
- Based on the same intervention principles as traditional CBT
- Arranged into a series of modules for a scheduled set of weeks
- Support in the form of automated messages, written feedback on homework and text-based communication between client and clinician
- Assessment questionnaires for monitoring progress, safety and outcomes

# Does iCBT work?

- Yes, guided iCBT is effective for the prevention and treatment of common mental health disorders.
- Efficacy studies shows no difference between iCBT and ftf CBT
- Effectiveness studies of iCBT in routine care have also shown effect sizes comparable to regular treatment.

# The Danish Internet Psychiatry Clinic

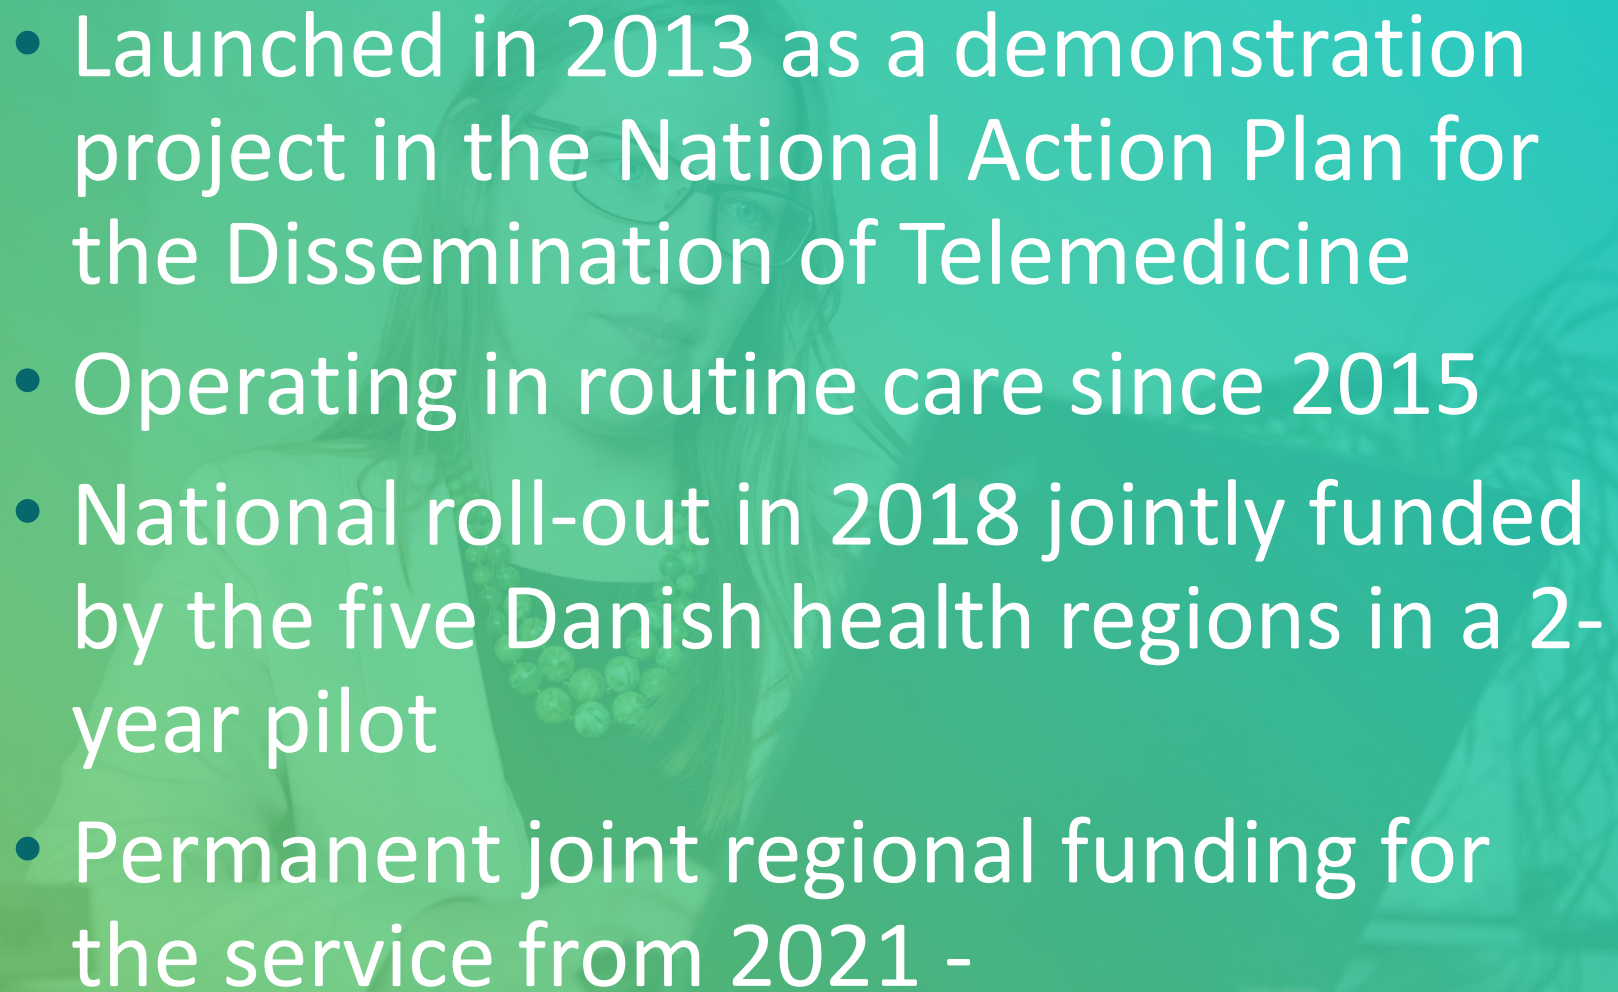

Guided iCBT service to people suffering from **mild to moderate depression and anxiety**

Self-referral and free of charge for Danish citizens 18 years+

Exclusion criteria:

- Patients who indicate imminent risk of suicide
- Schizophrenia, bipolar disorder, PTSD or OCD
- Severe substance use disorder
- Without a personal computer
- Very poor literacy skills

- 
- Launched in 2013 as a demonstration project in the National Action Plan for the Dissemination of Telemedicine
  - Operating in routine care since 2015
  - National roll-out in 2018 jointly funded by the five Danish health regions in a 2-year pilot
  - Permanent joint regional funding for the service from 2021 -

# Patient characteristics

- Patients using the clinic are 18-70 years old with a mean age of 36 – 60 % between 18-38.
- 70 % women (dep= 78%, anx=66%)
- A large proportion of patients are employed (dep=56%, anx=81%)
- Work and family obligations are stated as reasons to seek iCBT
- Cannot or does not wish to seek help with a primary sector psychologist
- Low cost is attractive

# Treatment Outcomes

- Significant effect of treatment in Internetpsykiatrien for both anxiety and depression (Mathiasen, Riper, Andersen, & Roessler, 2018).
- Successful implementation when compared with international iCBT clinics (Folker, Lauridsen, Mathiasen, Stenderup, Folker, 2017; Folker et al., 2018; Titov et al., 2018).
- Presently part of EU-project on systematic evidence-based implementation of iCBT: ImpleMentAll.

# Our roadmap for iCBT services

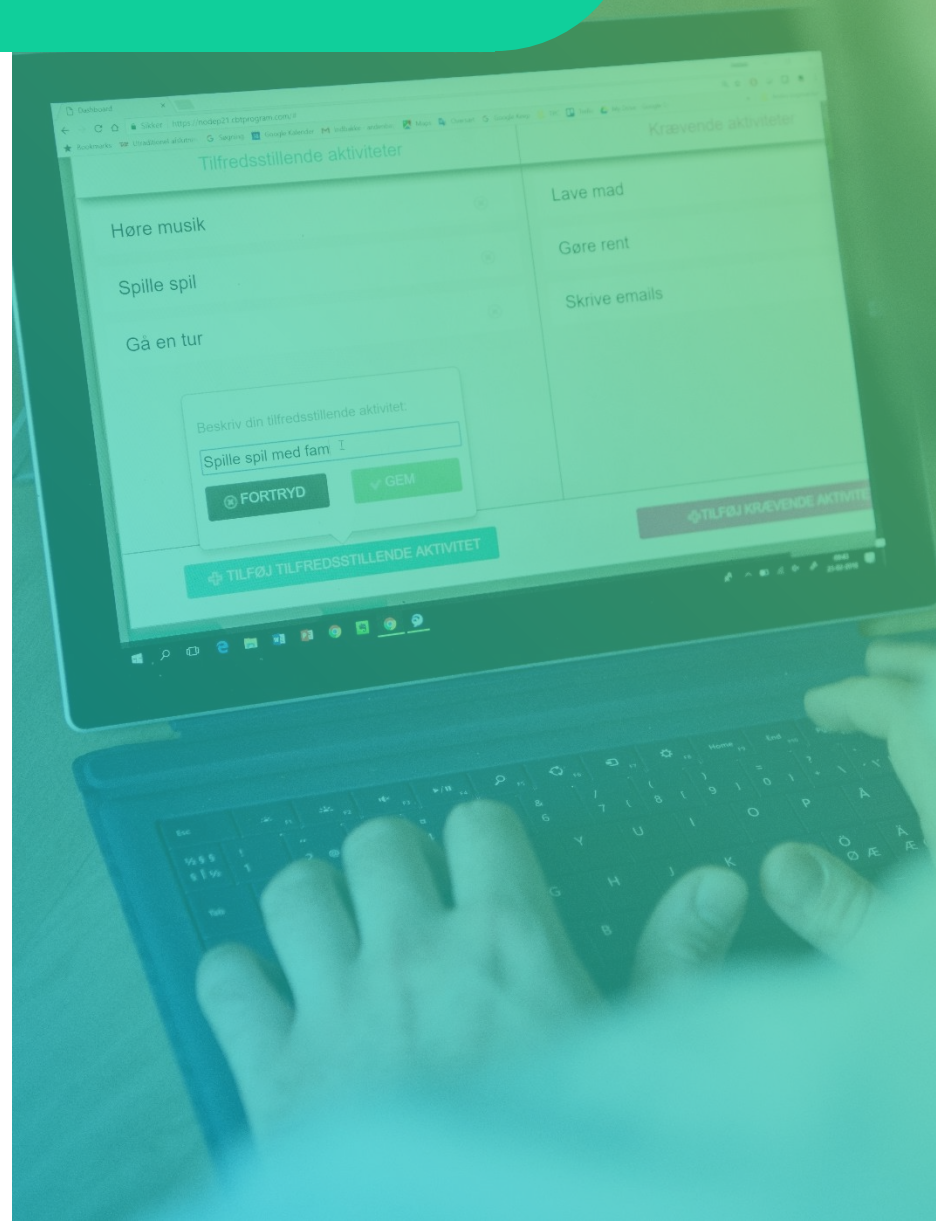

## Today:

Therapist-guided iCBT for:

- Depression and anxiety disorders
- Binge eating disorder
- Alcohol use disorder

## In 2021 and forward:

- Unguided iCBT for depression, anxiety and binge eating disorder
- Guided iCBT for eating disorders (anorexia, bulimia), PTSD, OCD, transdiagnostic therapy for adults and young people

A group of people are gathered around a table in a meeting room, looking at documents and talking. The scene is overlaid with a teal color. A large teal circle is positioned on the right side of the image, containing white text.

# Moving forward with e-mental health

# New strategy for digital mental health

[www.psykiatriensyddanmark.dk](http://www.psykiatriensyddanmark.dk)

## Strategi for digital psykiatri

### STRATEGIEN REALISERES GENNEM FØLGENDE STRATEGISKE INDSATSOMRÅDER:

1. Lettere adgang til psykiatrisk støtte og behandling
2. Flere nye digitale løsninger til forebyggelse, behandling og støtte til recovery
3. Større mulighed for indflydelse på eget behandlingsforløb
4. Bedre sammenhæng i behandlingsforløb
5. Digitalisering af arbejdsprocesser, digitale kompetencer og IT-sikkerhed
6. Øget brug af datadrevne forskningsmetoder til udvikling af fremtidig behandling

# Taskforce for digital mental health

*”Taskforcen er et forum, hvor vi kan samle op på hinandens digitale indsatser, succeser og fiaskoer og lære af dem. Én psykiatri kan ikke løse udfordringerne alene, så vi skal hjælpe hinanden og udvikle sammen med og for hinanden”.*

The image shows the top navigation bar of the Danish Regions website. On the left is the logo for 'DANSKE REGIONER' with three circles. To the right are menu items: 'SUNDHED', 'REGIONAL UDVIKLING', and 'AFTALER OG ØKONOMI'. Below this is a dark blue navigation bar with four columns of links: 'Behandling på hospitaler', 'Kvalitet og styring', 'Medicin', and 'TEMA: Personlig medicin'; 'Praksissektoren', 'Udrednings- og behandlingsret', 'Sundhedsinnovation og forskning', and 'TEMA: HealthTech:DK'; 'Psykiatri og social', 'DIGITALT: Sundhed for dig', 'TEMA: Ulighed i sundhed', and 'Coronavirus/COVID-19'. A hamburger menu icon is on the far right.

The image shows a sidebar menu with the following items: 'SUNDHEDSINNOVATION I REGIONERNE', 'INNOVATIONSBOARD', 'SPREDNING AF GODE LØSNINGER', '> TASKFORCE FOR DIGITAL PSYKIATRI' (highlighted in red), 'OFFENTLIG-PRIVAT SAMARBEJDE SOM DRIVER FOR INNOVATION', 'SUNDHEDSFORSKNING OG INNOVATION', and 'KLINISKE FORSØG MED LÆGEMIDLER'.

## Taskforce for digital psykiatri

Et tværregionalt initiativ, der skal skabe værdi for mennesker med psykiske lidelser.

Den digitale udvikling i psykiatrien har store potentialer for at give mennesker med psykiske lidelser lettere adgang til støtte og behandling. Alle fem regioner arbejder allerede med digitale løsninger, fx videokommunikation, internetprogrammer, apps, wearables, virtual reality, kunstig intelligens og sensorteknologi. Tiltagene bliver dog ofte i det lokale og kan med fordel koordineres på tværs af regionale grænser.

Forthcoming in  
2021.....

## 10-year action plan for mental health

- Improving mental health outcomes
- Improving mental health services

**Thank you for your attention  
– and questions?**
